

Drug Removals for Standard Control with Advanced Control Specialty Formulary®

Below is a list of medicines by drug class that have been removed from Blue Cross Blue Shield of Massachusetts plans with the Standard Control with Advanced Control Specialty Formulary. If you continue using one of the drugs listed below and identified as a Formulary Drug Removal, you may be required to pay the full cost.

If you are currently using one of the formulary drug removals, ask your health care provider to choose one of the generic or brand formulary options listed below.

After carefully reviewing each medication's cost and its clinically appropriate formulary options, we've removed the medications listed below from our formulary. However, a health care provider may request an exception if the medication prescribed is medically necessary. If the exception is approved, you may pay the highest-tier cost.

Category Drug Class	Other Considerations
All Drugs	On a quarterly basis, new and existing products - including limited source generics, products with significant cost inflation, and specialty and non-specialty products - may be re-evaluated to determine appropriate formulary placement. These evaluations will assess whether clinically appropriate and cost-effective options remain available on the formulary and may result in removal, addition or deletion of a product.
Atopic Dermatitis †	As new atopic dermatitis products launch, all existing products in the class will be re-evaluated to determine appropriate formulary placement. These evaluations will assess whether clinically appropriate and cost-effective options are available on the formulary and may result in removal, addition or deletion of a product on the first day of any calendar month.
Autoimmune and Hepatitis C †	For some clients, an Indication-Based Formulary will be utilized for products in these classes and may result in additional removals for certain conditions only.
Drugs for Infusion Into Spaces Other Than the Blood	A drug that must be infused into a space other than the blood will generally not be covered under the prescription drug benefit.
New-to-Market Agents ¹	New-to-market products and new variations of products already in the marketplace will not be added to the formulary immediately. Each product will be evaluated for clinical appropriateness and cost-effectiveness. Recommended additions to the formulary will be presented to the CVS Caremark® National Pharmacy and Therapeutics Committee (or other appropriate reviewing body) for review and approval.

The listed formulary options are subject to change.
