

WHAT YOU SHOULD KNOW ABOUT CORONAVIRUS

The risk currently posed by coronavirus is low in the U.S., including Massachusetts, according to the Centers for Disease Control and Prevention.*

There is no vaccine for the coronavirus, but there are ways to help prevent the spread of common respiratory viruses, according to medical and public health experts.

Health Tips

**WASH YOUR
HANDS**

**GET YOUR
FLU SHOT**

**STAY HOME IF
YOU'RE SICK**

**COVER YOUR NOSE
AND MOUTH**

Public health experts strongly urge people to get the flu shot.

The safe and effective flu shot does not protect against the coronavirus, but will protect you against the flu, which currently poses a much bigger threat in the U.S. It also will protect you from having to potentially battle two viruses at once.
